

COVID-19 Emergency Response Modular Flooring

THE JERRY L. PETTIS MEMORIAL VETERANS HOSPITAL

RAPID MOBILIZATION. FAST AND EASY INSTALLATION.

Like many companies catering to the event industry, Matrax was called upon to assist in the rapid deployment of components to quickly construct drive-through COVID-19 testing sites, temporary medial facilities, temporary distribution centers and other temporary structures.

COVID-19 SCREENING SHELTERS

Mark Moritz, Chief Engineer of The Jerry L. Pettis Memorial Veterans Hospital in Loma Linda, California, contacted Matrax in his effort to source a modular industrial flooring system (and quickly) to support two 640 square foot COVID-19 screening shelters over a paved parking lot. Chosen for its superior performance qualities, ease of installation and ability to be deployed quickly, the Matrax 4x4 flooring system met all the requirements of the project:

- Easy to clean and decontaminate
- Safe, textured surface to reduce slippage
- Panels interlock to create a stable, trip-free and surface
- Drainage holes keep water from pooling
- Spotlessly clean; newly manufactured
- Elevation from exposure to rain water
- ADA ramps for egress and ingress
- Efficient installation and removal

Matrax Inc. is the engineer, manufacturer and distributor of the Matrax 4x4 flooring system. The system is designed for a wide variety of applications, including turf protection for stadium events, flooring for temporary warehouses and maintenance structures, paver protection and pedestrian walkways on construction sites, work platforms, tent flooring, and other industrial uses. Our products are 100% recyclable and proudly made in the USA.
